

Biology

Geneva's Biology program invites you to discover the nature of God as you study His creation through the living world. By studying living things, their structures, functions, regulation, and interrelatedness, an understanding of the Creator and Designer emerges. Unique opportunities offered to students in this program include field-study, urban medical experience, and medical missions. Over 80% of graduates have been accepted into medical school, well above the national average placement rate. Our program not only provides deep relation to and instruction in God's word, but offers tangible skills and knowledge needed to thrive in your future work and education.
