

Biopsychology

Geneva's Biopsychology program brings the intricacies of biology and the complexity of psychology together to equip students with a unique avenue of discovery to serve God and neighbor. Students gain knowledge in the relationship between biological processes and behavior, giving students new opportunities in mental and physical health careers. Students engage in research investigations with faculty, grad school preparation, and the best instruction in both fields from a biblical worldview. This growing field offers a great opportunity for students interested in researching the fascinating relationship between biology and psychology.
